

## **HEATING**

When is the central heating on / off:

Please note that the central heating in all of the City Apartment buildings are *turned on around mid-September* and *turned off around mid-April*, both depending on the weather.

How does the radiators work:

All of the radiators in the apartments are thermostat controlled. This means that even if the radiator are at the maximum; 5, it will most likely not be burning hot all over, at all times. At some point the temperature will reach the same level in the apartment and then the radiator will stop heating. If the temperature in the room/apartment starts to drop, the radiator will start to heat again.

This is how the thermostat controlled radiators work. So even though the radiators sometimes seem cold and the heat is turned on, there is a good chance that it is still functional.

## **HVORNÅR BLIVER DER TÆNDT/SLUKKET FOR VARMEN**

Vær venligst opmærksom på at varmeanlæggene i City Apartment's ejendomme bliver slukket omkring 15. April og tændt omkring d. 15. September, afhængig af vejret.

## **SÅDAN VIRKER RADIATORERNE**

Bemærk venligst at radiatorerne er styret af en termostat. Dette betyder, at når lejligheden har nået en jævn temperatur/samme temperatur i hele lejligheden/rummet, så vil radiatoren køle lidt ned. Hvis temperaturen falder, vil den begynde at varme igen. Dette betyder også at selvom radiatoren står på 5, vil den ikke være varme over det hele, hele tiden, men det betyder ikke at den ikke virker.
